

Don't let service station attendants grease your water pump or rear wheel bearings fittings. The grease is no good for the pump as it coats the inside of the radiator, water pump grease must be used. The rear wheel bearings shouldn't be greased with a pressure gun as it will blow out the seals (I had this done on mine). They also packed my front wheel bearings with their all-purpose grease and at high speed travel it ran all over the tire, so I cleaned the bearings and used Kendall wheel bearing grease. On my C-17 I needed a muffler, we found one for a '53 Mercury fitted rather well.
