INFORMATION

The information consolidated into this Parts List includes the following:

Part name.

Model application.

Effective points of changes by car serial number, engine number or body number.

Part number.

Quantity used per car—one used per car except as indicated by (†).

Special notes necessary for proper identification of parts. Parts peculiar to right hand drive cars are indicated by (R.H.D.).

Parts not previously used on De Soto cars are designed by a double box symbol (⊠) preceding the part number.

Changes in part number are designated by a pound symbol (£) preceding the part number.

If a part number has been cancelled or superseded by another number it will be indicated thusly—#345497.

ARRANGEMENT

Each major group is divided into sub-groups which are numbered and lettered. The numbers used on the sub-groups are the same as the numbers of their respective major groups. The letters on the sub-groups are in alphabetical sequence in the major groups—for example:

Major Group No. 9 has sub-groups 9-A, 9-B, 9-C, etc.

Attaching parts such as bolts, nuts, studs, etc., can easily be identified as in most cases they follow the part or parts with which they are used and are shown indented from the margin.

ILLUSTRATIONS

Illustrations are included at the beginning of each major group. The correct names for parts in the illustrations are shown below or on the back of the picture and are keyed to the picture by reference numbers. Immediately following the part names will be found the number of the parts list sub-group in which the

part is listed. Also, immediately under the sub-group headings will be found the illustration plate numbers containing pictures of the parts in the sub-group.

An index of illustration plate numbers will be found immediately preceding the alphabetical index.

PAGE NUMBERING

To facilitate locating parts, all pages are numbered in consecutive order by major groups, the page number showing first the major group number followed by the

number of the page in the group—for example:

Page 9—3, 9—4, 9—5, indicate: Group 9, page 3; Group 9, page 4; Group 9, page 5.

ALPHABETICAL INDEX

Quick reference to any part by name is provided in the alphabetical index. This index shows the number of

the sub-group in which the parts are listed.

NUMERICAL INDEX

Reference to any part number is provided in the numerical index. This index lists all parts in numerical sequence and shows the sub-group in which each part number is listed, except numbers between 100,000 and

200,000 (Standard Parts) the listing of these will be found in Group 18 of The De Soto Master Parts List, Final Edition, May 1, 1934. The numerical index does not show their location elsewhere.

ORDERING PARTS BY MAIL

Service parts should be ordered on the standard parts order form No. 4615 (Part No. D-134) which is supplied upon request by the Chrysler Motors Parts Corporation. Instructions for the use of this form will be found printed on the form.

All body parts should be ordered from the Chrysler Motors Parts Corporation. Consult body manual and parts books for correct name and part numbers.

Please give car serial number and body number when ordering trim or top material, and if possible, submit a sample of the material to be matched. Orders for trim or upholstery fasteners should be accompanied with samples if possible.

It is also necessary to give car serial number and body number when ordering painted parts.

ORDERING PARTS BY TELEGRAM

To simplify ordering service parts by telegraph, and to facilitate decoding these orders, the Standard code of "DAY OR NIGHT" has been adopted.

The "DAY OR NIGHT" code is translated as follows:

D	A	Y	O	R	N	I	G	H	T	X
1	2	3	4	5	6	7	8	9	0	—

Most of the part numbers in active use by the Chrysler Motors Parts Corporation are numbers of six digits. Telegraphic charges for coded telegrams are made on a basis of five letters per code word. All code words of more than five letters, but not more than ten letters, are rated as two words; and all code words of more than ten letters, but not more than fifteen letters, are rated as three words in computing telegraphic charges.

In order to reduce telegraphic expenses to a minimum, the following master code letters may be used:

B	—100,000
C	—200,000
E	—300,000
F	—400,000
J	—500,000
K	—600,000

The combination of "DAY OR NIGHT" code and Master Code Letters is used as follows:

Part No. 52789	codes as	RAIGH
Part No. 301265	codes as	YTDANR
Part No. 302128	codes as	YTADAG

The above code words, when put into a message, would be charged at the rate of five words.

Using the Master Code Letters, these words would be written into the message as follows:

RAIGH EX TDANR TADAG

This message would be charged at the rate of four words and would be translated as follows:

52789	300000-	01265	02128
or:	52789	301265	302128

When using the Master Code Letters it is necessary that all part numbers be arranged in numerical sequence, and the Master Code Letters should be used only when there are two or more part numbers in the same series in a message, otherwise no saving will be effected.

The use of the Master Code Letters is particularly effective in savings in long messages, since the telegraph companies now accept day letters or night letters

containing coded words at the regular rates for these classes of service.

The "DAY OR NIGHT" code may also be used to refer to car serial numbers, invoice numbers, order numbers or any other numbers comprising a series of individual digits. For example: Car serial No. 5,068,501 is coded as RTNGRTD.

The following utility code is for use in giving shipping instructions or making inquiries concerning parts orders by telegram:

Blank Motor Company

The above night letter as coded is rated as 50 words.
If the Master Code Letters had not been used it would
have been rated at 65 words.

Extreme care should be used when writing coded
telegrams, as orders received in code are shipped by
the part number according to the translation of the
code as received.

NOTE—The following symbols are used in connection with engine numbers.

Engine numbers without symbols indicate "STANDARD CYLINDERS AND CRANKSHAFT BEARINGS."

The letter "A" immediately following the engine number indicates "BORE .020" (.508 mm.) Larger than Standard."

The letter "B" immediately following the engine number indicates "MAIN and CONNECTING ROD BEARINGS .010" (.254 mm.) Smaller than Standard."

The letters "AB" immediately following the engine number indicate "CYLINDER BORE .020" (.508 mm.) Larger than Standard," the "MAIN and CONNECTING ROD BEARING .010" (.254 mm.) Smaller than Standard."

The letters in the circular pads at either end of the engine number pad are for the use of factory inspectors only and should not be connected with the engine number.

NOTE—A power plant assembly (complete) includes engine, clutch and transmission assemblies (complete) including electrical equipment, carburetor and fuel pump.
