

Kirk Dial Corp., Seaboard Bldg., Seattle 1, Wash., was recommended to me by an antique clock man as being very good for refinishing dials. A Mr. C. M. Gilson answered my inquiry about touching up the dials on my C-17. He suggested trying to remove the dials and wash them with baking soda and water. "If this does not clean them up, send them to us for a cost estimate." Mr. Gilson further added that he used to be the proud owner of an Airflow, and that it was a fine running machine. He cracked the block, had it welded, but it didn't hold, then finally sold it.
