

Restoring Pot Metal with Great Success

by John Spinks

I have been using a range of the POR15 rust preventative paint products on the restoration of the C-9 Coupe and was wondering if any of you guys have tried them and if so what do you think of them.

So far I think that they are OK provided you follow the instructions exactly.

I have also come across a product called Nickel Cobalt which can be used with great success to restore the pot metal zinc castings for door handles winders and the like and looks like chrome plate...only better!

The products can be used at home and are relatively safe to use.

If you want to read about them check out the website <<www.eplate.com.au>>.

I have been stripping and restoring my parts and will start plating a few samples shortly and will let you guys know how it works.

Cheers!
